

22 January 2018

**ASX Announcement**  
**ETHERSTACK PLC [ASX:ESK]**  
("Etherstack" or the "Company")  
**Completion of Canadian Utility Project Stage 2**

The Company is pleased to announce the successful completion of deliverables for Stage 2 of the digital radio network project for ATCO Electric in Alberta Province in Canada. The Stage 2 award was announced on 20 September 2017 and follows the initial Stage delivered in 2016.

Stage 2 involved delivery of digital radio network equipment and associated services to allow the utility to expand both the number of sites (coverage) as well additional capacity on the network. The solution conforms to the APCO P25 digital radio standard.

The utility has operated an existing Etherstack APCO P25 trunked radio network for several years and the Company provides long term support for the ongoing operation of this mission critical radio network. The network provides communications capability to the utility's operations and maintenance staff across large sections of Alberta Province.

This network is one of four large digital radio networks that Etherstack has supplied and supports for the North American electric utility market. The other notable networks being located in New Jersey, Pennsylvania, West Virginia and Maryland.

The Company expects further network expansions from its utilities client base during 2018.

Etherstack CEO, David Deacon said "We are pleased to complete another substantial North American project. The Company is entering 2018 with a strong order book from the existing customer base which will result in a stronger than normal first half in 2018."
